Classification of study members diagnosed as having diabetes by 1999 (age 53 years)

Description of variables	Classification of study members diagnosed as having diabetes by 1999 (age 53 years)
Categories of variables*: (may be more than one)	Diabetes
Summary of work undertaken	Derivation of new diabetes variables till age 53 years (1999)
Date of submitting documentation	01/04/09
Output	dagec, diabec, diabty, diabre
Name of person responsible for cleaning/derivation:	Mary Pierce

Overview

The purpose of this is to establish who can be reliably regarded as having T2 diabetes. I used the flat file of medication from 1977, Mike Wadsworth's (MW) notes on those diagnosed as diabetic until age of 36 (1982), the variable **dagec** (age at diagnosis) and **diabec** (indicator of having diabetes or not), as well as ***AKID991*,*** AKID992**…….. …..**AKID999** (age of study member at birth of each child).

The procedure involved an initial classification of anyone with diabetes diagnosed under age of 20 being assumed to have T1 and anyone over 50 assumed to have T2. Then medications were checked from microfiche and MW records and from medication file from 1977 to 1999. Any woman whose diabetes was diagnosed within a year of the birth of one of her children was assessed as to whether she had gestational diabetes (GDM).
Note: Dr. Mary Pierce's detailed notes on how each case was classified can be found in the word documentation entitled: males_and_females_diagnosed_by_1999. This can be found in $der/diabetes.

Previous diabetes variables

DAGEC: Age at diagnosis in years.

888= No diabetes 999=Missing

DIABEC: Diabetes at any point upto &incl 1999

The variable that indicates whether people have reported diabetes at any point up to and including the 1999 data collection.

Values for this variable are: 0= no diabetes 1= diabetes 9=missing

New Derived variables

These were derived using the procedure described above

DIABTY: Type of diabetes

Values for this variable are:

1=Type 1 - diagnosed younger age (28 or less in this group) and on insulin since diagnosis 2=Type 2 - diagnosed at older age (30 or more in this group) and only ever on diet or OHA, or insulin added more than 2 years after diagnosis 3=GDM- diagnosed in pregnancy and no further record of treatment for diabetes 4=Unknown type 5=Unsure ? type 1 / type 2 – see notes in document: males_and_females_diagnosed_by_1999 6=Unsure ? type 2 / type 1 – see notes in document: males_and_females_diagnosed_by_1999 88 =No diabetes 99=Missing

DIABRE: Reason for diabetes classification

This variable gives the reason for classification (based on age at diagnosis and medication record)

Values for this variable are:

1= Diet only (including no record of anti-diabetic medications); or on oral hypoglycaemics only 2 =On OHA initially and insulin added after more than 2 years 3 =Age diagnosis younger 4 = On insulin only but age at diagnosis older and uncertainty about initial treatment. 5 = On insulin only and age of diagnosis younger. 6 = On insulin from diagnosis 7 =See notes of Dr Mary Pierce 8 =diagnosed in pregnancy and no further record of treatment for diabetes 88 =No diabetes 99 =Missing

Variables in this document

7 high-confidence matches

Variable	Label	How it was found
Questionnaire data [55] › Health and medical history [510] › Medical conditions [5101] › Endocrine and metabolic conditions [51015]		
dagec	Age at diagnosis of diabetes (years) - up to age 53 years	bold token
diabec	Diabetes at any point - up to age 53 years	bold token
diabre	Reason for diabetes classification - up to age 53 years	bold token
diabty	Type of diabetes - up to age 53 years	bold token
Questionnaire data [55] › Sociodemographics [515] › Household [5152]		
akid991	Age at which survey member had their first child - up to age 53 years	bold token
akid992	Age at which survey member had their second child - up to age 53 years	bold token
akid999	Age at which survey member had their ninth child - up to age 53 years	bold token

1 low-confidence match

Variable	Label	How it was found
Questionnaire data [55] › Sociodemographics [515] › Marital status [5153]		
mary	Thinking of your first marriage, when were you married. Can you tell me the year? - at age 53 years	prose scan
