| <b>Summary of work undertaken</b>   | <p>Volumetric T1 MRI scans for participants from Insight 46 were parcellated using Geodesic Information Flows (GIF) version 3 and volumes of regions outputted to a csv file which was then transferred to a stata file. The parcellation has been further cleaned by using the whole brain delineations performed by the DRC trials team.</p> <p>See:</p> <p>Cardoso, M. J., Modat, M., Wolz, R., Melbourne, A., Cash, D., Rueckert, D., &amp; Ourselin, S. (2015). Geodesic information flows: spatially-variant graphs and their application to segmentation and fusion. IEEE transactions on medical imaging, 34(9), 1976-1988.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Summary

Volumetric T1 MRI scans for participants from Insight 46 were parcellated using Geodesic Information Flows (GIF) version 3 and volumes of regions outputted to a csv file which was then transferred to a stata file. The parcellation has been further cleaned by using the whole brain delineations performed by the DRC trials team.
